A food delivery app for college students

Analyze My Idea

FoodHub

FoodHub is a food delivery app designed specifically for college students, allowing them to easily order their favorite meals from local restaurants and cafes. The app will provide a seamless user experience, with features such as customizable meal plans, real-time order tracking, and exclusive discounts.

Implementation Phases

1 Research and Planning

Conduct market research, analyze competitors, and define the app's features and functionality.

Week 1-2

2 Backend Development

Design and implement the backend infrastructure using AWS Lambda, API Gateway, and DynamoDB to handle user authentication, order processing, and payment integration.

Week 3-4

3 Frontend Development

Develop the user-friendly interface using a framework such as React, with features such as meal plan customization, real-time order tracking, and exclusive discounts.

Week 5-6

4 Testing and Deployment

Perform thorough testing of the app, including unit testing, integration testing, and user acceptance testing. Deploy the app to AWS CloudFront for global scalability and high performance.

Week 7-8

Cost Breakdown

Service	Free Tier	Monthly Cost
Lambda	FREE	\$0.00
API Gateway	No	\$3.50
DynamoDB	FREE	\$0.00
CloudFront	FREE	\$0.00
Cognito	FREE	\$0.00
Total Monthly Cost		\$3.50
